SAFETY DATA SHEET

1. Identification

Product identifier: NOVAPOL® Polyethylene – Not Coloured (All Grades)

Other means of identification
SDS number: NOVA-0029
Synonyms: HDPE, LDPE, LLDPE, LMDPE, MDPE Polyethylene resins, ethylene polymers

Recommended use and restriction on use
Recommended use: Thermoplastic resin extruded into film, sheet or pipe, or moulded into containers and other shapes.
Restrictions on use: All uses other than the identified.

Manufacturer/Importer/Supplier/Distributor Information

Manufacturer
Company Name: NOVA Chemicals
Address: P.O. Box 2518, Station M
Calgary, Alberta, Canada T2P 5C6
Telephone: Product Information: 1-412-490-4063
SDS Information Email: msdsemail@novachem.com

Emergency telephone number:
1-800-561-6682, 1-403-314-8767 (NOVA Chemicals) (24 hours)
1-800-424-9300 (CHEMTREC-USA) (24 hours)

2. Hazard(s) identification

Hazard Classification

OSHA hazard(s)
Combustible dust

Label Elements

Hazard Symbol: No symbol
Signal Word: Warning
Hazard Statement: May form combustible dust concentrations in air.

Precautionary Statements:

Prevention:
Keep Out of Reach of Children.
Keep away from uncontrolled heat and incompatible materials.
Ground all material handling and transfer equipment.
Wash hands thoroughly after handling.
Prevent dust accumulation to minimize explosion hazard.
Use in a well-ventilated area.
Avoid release to the environment - water.
Wear eye protection/protective gloves as needed/wear full face-shield during thermal processing if contact with molten material is possible/wear respirator if dusty.

Response:
IF SWALLOWED: Do NOT induce vomiting. Get medical advice/attention.
IF ON SKIN: Wash with plenty of water and soap. If skin irritation occurs: Get medical advice/attention.
IF INHALED: Remove person to fresh air and keep comfortable for breathing. Get medical advice/attention.
IF IN EYES: flush eyes with water. Remove contact lenses, if present and easy to do. Continue rinsing.
Storage: Store in accordance with all current regulations and standards. Protect from sunlight.

Disposal: Dispose of contents/container in accordance with local/regional/national/international regulations. Refer to manufacturer or supplier for information on recovery or recycling.

Other hazards which do not result in GHS classification: Spilled product may create a dangerous slipping hazard.

3. Composition/information on ingredients

<table>
<thead>
<tr>
<th>Chemical Identity</th>
<th>Common name and synonyms</th>
<th>CAS number</th>
<th>Content in Wt percent (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Silica, cristobalite</td>
<td>Crystalline silica</td>
<td>14464-46-1</td>
<td>&lt;0.3%</td>
</tr>
</tbody>
</table>

Additional Information: The silica, cristobalite is inextricably bound or coated in the polyethylene.

4. First-aid measures

Ingestion: Product is not expected to be absorbed from the gastrointestinal tract. DO NOT INDUCE VOMITING. Loosen tight clothing such as a collar, tie, belt or waistband. Seek immediate medical attention.

Inhalation: Move affected individual to non-contaminated air. Loosen tight clothing such as a collar, tie, belt or waistband to facilitate breathing. Seek immediate medical attention if the individual is not breathing, is unconscious or if any other symptoms persist. Inhalation of smoke following a fire may result in delayed pulmonary oedema; seek immediate medical attention.

Skin Contact: Remove dusty or contaminated clothing and shoes. Wash affected area with soap and water. Seek medical attention if symptoms develop or persist. In case of contact with molten product, cool rapidly with water and seek immediate medical attention. Do not attempt to remove molten product, or molten product that has cooled, from skin without medical assistance.

Eye contact: Remove contact lenses, if it can be done safely. Immediately flush eyes with water for at least 15 minutes, while holding eyelids open. Seek medical attention if symptoms develop or persist.

Most important symptoms/effects, acute and delayed

Symptoms: Eye/skin contact with powder or fines may cause mechanical irritation. Eye/skin contact with hot or molten material may cause severe injury, including possible blindness/thermal burns. Ingestion may produce mild gastrointestinal irritation and disturbances. Inhalation of fine particles may cause respiratory irritation. Thermal processing fumes may cause irritation, pulmonary oedema and a possible asthma-like response. The crystalline silica is inextricably bound or coated in the polyethylene; this would preclude an inhalation hazard.
Indication of immediate medical attention and special treatment needed

Treatment: After adequate first aid, no further treatment is necessary, unless symptoms reappear. For more detailed medical emergency support information call 1-800-561-6682 or 1-403-314-8767 (24 hours, NOVA Chemicals Emergency Response). Burns should be treated as thermal burns. Molten resin will come off as healing occurs; therefore, immediate removal from the skin is not necessary. Treatment should be directed at the control of symptoms and the clinical condition of the patient. Ingested material should pass through the digestive system without injury. The crystalline silica is inextricably bound or coated in the polyethylene; this would minimize the potential for skin irritation and preclude an inhalation hazard from the additive(s).

5. Fire-fighting measures

General Fire Hazards: Solid resins support combustion but do not meet combustible definition. Product will burn at high temperatures but is not considered flammable. Under fire conditions, product will readily burn and emit irritating smoke. A high concentration of airborne powders or dust may form an explosive mixture with air.

Suitable (and unsuitable) extinguishing media

Suitable extinguishing media: Water fog or water spray. In the case of small fires, dry chemical or carbon dioxide or foam can be used.

Unsuitable extinguishing media: Avoid high pressure, direct water stream that may spread molten or burning resins.

Specific hazards arising from the chemical: Upon heating, polyethylene may emit various oligomers, waxes and oxygenated hydrocarbons as well as carbon dioxide, carbon monoxide and small amounts of other organic vapors (e.g. aldehydes, acrolein). Inhalation of these decomposition products may be hazardous. Accumulated fine dusts may form an explosive mixture with air. Risk of dust-air explosion is increased if flammable vapors are also present. May accumulate hazardous static charge.

Special protective equipment and precautions for firefighters

Special fire fighting procedures: Position upwind. Keep unnecessary personnel away. Move containers from fire area if you can do so without risk. Fight fire from maximum distance or use unmanned holders or monitor nozzles. Apply extinguishing media carefully to avoid creating airborne dust. Flood with water. Avoid inhaling any smoke and combustion materials. Remove and clean or destroy any contaminated clothing. Cool containers with flooding quantities of water until well after the fire is out. Control runoff waters to prevent entry into sewers, drains, ditches, underground or confines spaces and waterways.

Special protective equipment for fire-fighters: Fire fighters should wear full-face, self-contained breathing apparatus and thermal protective clothing.
6. Accidental release measures

**Personal precautions, protective equipment and emergency procedures:**
Isolate area. Keep unnecessary personnel away. Alert stand-by emergency and fire fighting personnel. Dust Deposits should not be allowed to accumulate on surfaces, as these may form an explosive mixture if they are released into the atmosphere in sufficient concentration.

**Methods and material for containment and cleaning up:**
Stop leak, isolate and contain spill. Prevent entry into sewers, drains, ditches, underground or confined spaces, water intakes and waterways. Spilled product may create a dangerous slipping hazard. Use appropriate tools to put the spilled solid in an appropriate disposal or recovery container. Reuse or recycle where possible. Avoid dispersal of dust in the air (i.e., clearing dust surfaces with compressed air). Do not get water on spilled substance or inside containers. Do not touch or walk through spilled material. Contact local police/emergency services and appropriate emergency telephone numbers provided in Section 1. Ensure that statutory and regulatory reporting requirements in the applicable jurisdiction are met. Wear appropriate protective equipment and clothing during cleanup. Individuals without appropriate protective equipment should be excluded from area of spill until cleanup has been completed.

7. Handling and storage

**Precautions for safe handling:**
Handle in contained and properly designed equipment systems. Use with adequate ventilation. Avoid ingestion and inhalation. Keep away from uncontrolled heat and incompatible materials. Ground all material handling and transfer equipment to dissipate buildup of static electricity. Keep handling areas free of loose pellets, powders and dust buildup. Every effort should be made to prevent the accumulation of powders or fine dusts around material handling systems. Accumulated powders or fine dusts may form explosive air-dust mixtures. For additional information on control of static and minimizing potential dust and fire hazards, refer to NFPA-654, "Standard for the Prevention of Fire and Dust Explosions from the Manufacturing, Processing, and Handling of Combustible Particulate Solids, 2013 Edition". Spilled product may create a dangerous slipping hazard.

**Conditions for safe storage, including any incompatibilities:**
Storage area should be clearly identified, well illuminated, clear of obstruction and accessible only to trained and authorized personnel. Store in closed, grounded and properly designed vessels, away from uncontrolled heat and incompatible materials. Outdoor storage of product in bags requires protection from ultra-violet sunlight by use of a UV stabilized bag or alternate means. Avoid accumulation of dust by frequent cleaning and suitable construction of storage and handling areas. Keep shovels and vacuum systems readily available for cleanup of loose material. **DO NOT** enter filled bulk containers and attempt to walk over product, due to risk of slipping and possible suffocation. Use a fall arrest system when working near open bulk containers.

8. Exposure controls/personal protection

**Control Parameters**

**Occupational Exposure Limits**
During dusty conditions, ACGIH recommends for Particles (insoluble or poorly soluble) not otherwise specified a TWA of 10 mg/m³ (inhalable particles), 3 mg/m³ TWA ( respirable particles); OSHA recommends for Nuisance particulates a TWA of 15 mg/m³ (total dust), 5 mg/m³ TWA ( respirable fraction).

**Appropriate Engineering Controls**

Engineering methods to reduce hazardous exposure are preferred controls. Methods include mechanical ventilation (dilution and local exhaust) process or personal enclosure, remote and automated operation, control of process conditions, leak detection and repair systems, and other process modifications. Ensure all exhaust ventilation systems are discharged to outdoors, away from air intakes and ignition sources. Supply sufficient replacement air to make up for air removed by exhaust systems. Administrative (procedure) controls and use of personal protective equipment may also be required.

It is recommended that all dust control equipment such as local exhaust ventilation and material transport systems involved in handling of this product contain explosion relief vents or an explosion suppression system or an oxygen-deficient environment. Use only appropriately classified electrical equipment and powered industrial trucks.

**Individual protection measures, such as personal protective equipment**

**General information:**

Personal protective equipment (PPE) should not be considered a long-term solution to exposure control. Employer programs to properly select, fit, maintain, and train employees to use equipment must accompany PPE. Consult a competent industrial hygiene resource, the PPE manufacturer's recommendation, and/or applicable regulations to determine hazard potential and ensure adequate protection.

Note: In this product, any crystalline silica content is inextricably bound or coated in the polyethylene. This would preclude an inhalation hazard.

**Eye/face protection:**

Wear safety glasses during normal handling. Wear full-face shield during thermal processing if contact with molten material is likely.

**Skin Protection**

**Hand Protection:**

Wear thermal insulating gloves.

**Other:**

Wear protective clothing (such as long sleeved shirts and long pants) whenever molten material is present. Safety footwear with good traction is recommended to help prevent slipping. Static Dissipative (SD) rated footwear is also recommended.

**Respiratory Protection:**

If engineering controls and ventilation are not sufficient to prevent buildup of aerosols, vapors or dusts, appropriate NIOSH approved air-purifying respirators or self-contained breathing apparatus (SCBA) appropriate for exposure potential should be used. Air-supplied breathing apparatus must be used when oxygen concentrations are low or if airborne concentrations exceed the limits of the air-purifying respirators.

**Hygiene measures:**

Use effective control measures and PPE to maintain worker exposure to concentrations that are below these limits. Ensure that eyewash stations and safety showers are in close proximity to work locations.

10. Stability and reactivity

Reactivity: Contact with incompatible materials. Sources of ignition. Exposure to heat.

Chemical Stability: This product is stable under normal use conditions for shock, vibration, pressure, or temperature.

Possibility of Hazardous Reactions: Hazardous polymerization not likely to occur.

Conditions to Avoid: Avoid strong oxidizing agents. Avoid processing material over 300°C (572°F).

Incompatible Materials: May react with strong oxidizing agents. Organic solvents, ether, gasoline, lubricating oils, chlorinated hydrocarbons and aromatic hydrocarbons may react with and degrade polyethylene. Powders or dusts may form an explosive mixture with air. Risk of dust-air explosion is increased if flammable vapors are also present.

Hazardous Decomposition Products: Upon heating, polyethylene may emit various oligomers, waxes and oxygenated hydrocarbons as well as carbon dioxide, carbon monoxide and small amounts of other organic vapors (e.g. aldehydes, acrolein). Inhalation of these decomposition products may be hazardous.
11. Toxicological information

Information on likely routes of exposure

**Ingestion:** Product is not expected to be absorbed from the gastrointestinal tract.

**Inhalation:** During processing, thermal fumes and inhalation of fine particles may cause respiratory irritation.

**Skin Contact:** During processing, contact with powder or fines may cause mechanical irritation. Contact with hot or molten product may cause burns.

**Eye contact:** During processing, contact with powder or fines may cause mechanical irritation. Contact with hot or molten product may cause severe injury.

Symptoms related to the physical, chemical and toxicological characteristics

**Ingestion:** Ingestion may produce mild gastrointestinal irritation and disturbances.

**Inhalation:** Inhalation of fine particles may cause respiratory irritation. Thermal processing fumes may cause irritation, pulmonary edema and a possible asthma-like response.

**Skin Contact:** Contact with powder or fines may cause mechanical irritation, which is increased by rubbing or if skin is dry. Contact with hot or molten product may cause severe thermal burns.

**Eye contact:** Contact with powder or fines may cause mechanical irritation. Contact with hot or molten product may cause severe injury, including possible blindness.

Information on toxicological effects

**Acute toxicity (list all possible routes of exposure)**

**Oral**
- **Product:** No data available.

**Dermal**
- **Product:** No data available.

**Inhalation**
- **Product:** No data available.

**Specified substance(s):** Silica, cristobalite

Inhalation may cause discomfort or irritation to the respiratory tract and nasal passages. The silica, cristobalite is inextricably bound or coated in the polyethylene; this would preclude an inhalation hazard from the additive(s).

**Repeated dose toxicity**
- **Product:** No data available.

**Skin Corrosion/Irritation**
- **Product:** No data available.

**Specified substance(s):** Silica, cristobalite

May be irritating. The silica, cristobalite is inextricably bound or coated in the polyethylene; this would minimize the potential for skin irritation.
Serious Eye Damage/Eye Irritation
Product: No data available.

Specified substance(s):
Silica, cristobalite May be irritating. The silica, cristobalite is inextricably bound or coated in the polyethylene; this would minimize the potential for eye irritation.

Respiratory or Skin Sensitization
Product: No data available.

Carcinogenicity
Product: No data available.

IARC Monographs on the Evaluation of Carcinogenic Risks to Humans:
Silica, cristobalite Overall evaluation: 1. Carcinogenic to humans.

US. National Toxicology Program (NTP) Report on Carcinogens:
Silica, cristobalite Known To Be Human Carcinogen.

No carcinogenic components identified

Germ Cell Mutagenicity
In vitro
Product: There are no known or reported genetic effects.

Specified substance(s):
Silica, cristobalite Mutagen. The silica, cristobalite is inextricably bound or coated in the resin; this would minimize the potential for exposure.

In vivo
Product: There are no known or reported genetic effects.

Specified substance(s):
Silica, cristobalite Mutagen. The silica, cristobalite is inextricably bound or coated in the resin; this would minimize the potential for exposure.

Reproductive toxicity
Product: There are no known or reported reproductive effects.

Specific Target Organ Toxicity - Single Exposure
Product: No data available.

Specific Target Organ Toxicity - Repeated Exposure
Product: No data available.

Specified substance(s):
Silica, cristobalite Lungs. Target organ is the lung and respiratory system. However, the silica, cristobalite is inextricably bound in the resin; this would minimize the potential for exposure.

Aspiration Hazard
Product: No data available.

Other effects: No data available.
12. Ecological information

Ecotoxicity:

**Acute hazards to the aquatic environment:**

**Fish**
Product: No data available.

**Specified substance(s):**
Silica, cristobalite
LL 0 (Zebra Fish, 96 h): 10,000 mg/l

**Aquatic Invertebrates**
Product: No data available.

**Specified substance(s):**
Silica, cristobalite
LC 50 (Water Flea, 24 h): 10,000 mg/l

**Toxicity to Aquatic Plants**
Product: No data available.

**Chronic hazards to the aquatic environment:**

**Fish**
Product: No data available.

**Aquatic Invertebrates**
Product: No data available.

**Toxicity to Aquatic Plants**
Product: No data available.

**Persistence and Degradability**

**Biodegradation**
Product: Product does not readily degrade. Under optimal oxidation conditions, >99% of polyethylene will remain intact after exposure to microbial actions. Product will slowly change (emtite) in the presence of sunlight, but will not fully breakdown. Product buried in landfill has been found to be stable over time. No toxic degradation products are known to be produced.

**BOD/COD Ratio**
Product: No data available.

**Bioaccumulative Potential**

**Bioconcentration Factor (BCF)**
Product: Pellets may accumulate in the digestive systems of birds and aquatic life, causing injury and possible death due to starvation.

**Partition Coefficient n-octanol / water (log Kow)**
Product: No data available.

**Mobility in Soil:**
If released into watercourses, most polyethylene pellets float. Pellets are persistent in aquatic and terrestrial systems. Product should be recovered from water and land following spills. This product has not been found to migrate through soils.

**Other Adverse Effects:**
Polyethylene is an essentially biologically inert solid and considered non-toxic to the aquatic environment. It is stable (does not decompose) in landfills or in aquatic systems.
13. Disposal considerations

**General Information:**
This product is not known to contain or generate hazardous wastes according to US regulations. The use, mixing or processing of this product with other materials may alter its properties or hazards. Waste generator is advised to carefully consider hazardous properties and control measures needed for other materials that may be found in the waste. No EPA Waste Numbers are applicable for this product's components.

**Disposal instructions:**
Check federal, state and local environmental regulations prior to disposal. Preferred disposal methods for polyethylene in order of preference are: 1) clean and reuse if possible, 2) recover and resell through plastic recyclers or resin brokers, 3) incinerate with waste heat recovery and 4) landfill. Reuse, recycling, storing, transportation and disposal must be in accordance with applicable federal, provincial/state and local regulations. DO NOT ATTEMPT TO DISPOSE OF BY UNCONTROLLED INCINERATION. Open burning of plastics at landfills should not be undertaken.

**Contaminated Packaging:**
Check federal, state and local environmental regulations for additional information.

14. Transport information

**DOT**
Not regulated.

**IMDG/IATA/ICAO**
Not regulated.

15. Regulatory information

**US Federal Regulations**

TSCA Section 12(b) Export Notification (40 CFR 707, Subpt. D)
None present or none present in regulated quantities.

US. OSHA Specifically Regulated Substances (29 CFR 1910.1001-1050)
None present or none present in regulated quantities.

CERCLA Hazardous Substance List (40 CFR 302.4):
None present or none present in regulated quantities.

Superfund Amendments and Reauthorization Act of 1986 (SARA)

**Hazard categories**
Not listed.

**SARA 302 Extremely Hazardous Substance**
None present or none present in regulated quantities.

**SARA 304 Emergency Release Notification**
None present or none present in regulated quantities.

Clean Water Act Section 311 Hazardous Substances (40 CFR 117.3)
None present or none present in regulated quantities.

Clean Air Act (CAA) Section 112(r) Accidental Release Prevention (40 CFR 68.130):
None present or none present in regulated quantities.

US State Regulations
US. California Proposition 65
This product does not contain any reproductive toxins or carcinogenic substances that would require a warning under CA Prop 65.

US. New Jersey Worker and Community Right-to-Know Act
Chemical Identity
Silica, cristobalite

US. Pennsylvania RTK - Hazardous Substances
No ingredient regulated by PA Right-to-Know Law present.

Inventory Status:
Canada DSL Inventory List: On or in compliance with the inventory.
US TSCA Inventory: On or in compliance with the inventory.

16. Other information, including date of preparation or last revision

Issue Date: 05/31/2015
Revision Date: 05/31/2015
Version #: 6.0
Further Information:

Exposure to the Hazardous Combustion and Decomposition Products as described in the MSDS, Sections 5 and 10 may be linked with various acute and chronic health effects. These effects include irritation of eyes and upper respiratory tract primarily from the aldehydes; breathing difficulties, systemic toxicity such as liver, kidney, and central nervous system effects.

NOVA Chemicals has monitored worker exposures to emissions during commercial-scale processing of polyethylene. Concentrations of hazardous decomposition products were determined to be well below established exposure limits in the workplace. "Quantitation of Employee Exposure to Emission Products Generated By Commercial-Scale Processing of Polyethylene" is available in the Am. Ind. Hyg. Assoc. J. 56:809-814 (1995) and "Quantification of Emission Compounds Generated During Commercial-Scale Processing of Advanced SCLAIRTECH™ Polyethylene" is available in the Journal of Plastic Film & Sheeting Volume 26 Issue 2, April 2010.

For information on ventilation considerations for the control of volatile air contaminants from polyethylene, please request a copy of NOVA Chemicals' publication, "Ventilation Guidelines for Heat-Processing Polyethylene Resins".

For additional information on unloading hopper cars containing plastic resins, refer to NOVA Chemicals' publication, "Hopper Car Unloading Guide".

For information on processing properties, selection of NOVAPOL resin grades, refer to the NOVAPOL Product Data Sheets available on our web site, under Products & Applications: http://www.novachemicals.com.

For additional information on preventing pellet loss, refer to published plastic industry publications and resources under 'Operation Clean Sweep'; now downloadable from the web at http://www.opcleansweep.org/.

Polyethylene fines and dust particles are listed as a Class I combustible dust by the National Fire Protection Association (see NFPA-68, Table F.1 (e)). For additional information on control of static and minimizing potential dust and fire hazards, refer to NFPA-654, "Standard for the Prevention of Fire and Dust Explosions from the Manufacturing, Processing and Handling of Combustible Particulate Solids, 2013 Edition".

For NOVAPOL resin grade specific information including food contact compliance statements, please contact your sales representative or refer to NOVA Chemicals' polyethylene Product Data Sheets.
