MATERIAL SAFETY DATA SHEET

I. PRODUCT INFORMATION

Chemical Family: Flo

Flexible Polyurethane Foam

Product Name:

AQUACHAMP®

AQUAWASH-N-DRI® HYDRA® SPONGE CHAMPION BULLY®

II. HAZARDOUS INGREDIENTS

CAS#

% by Weight

OSHA PEL/ACGIH TLV

Polyurethane Foam

9009-54-5

100 %

None Established

Foamex polyurethane foam is a fully cross-link reaction product of polyhydroxy polyol, toluene diisocyanate, catalysts, surfactants, pigments and water. Polyurethane foam product is a polymeric material consisting of repeating units of carbon, hydrogen, oxygen and nitrogen.

III. PHYSICAL/CHEMICAL CHARACTERISTIC

Boiling Point:

Not Applicable

Density:

0.5-40 lbs./cft.

Vapor Pressure (mm Hg):

Not Applicable

Melting Point:

450-500°F

Vapor Density:

Not Applicable

Évaporation Rate:

Not Applicable

Solubility in Water:

Insoluble

Appearance and Odor:

Uniform cellular solid structure of varying colors with slight odor.

IV. FIRE AND EXPLOSION HAZARD DATA

Flash Point:

Decomposition products flash at >500°F

LEL: None

Flammable Limits:

Not Applicable

UEL: None

800 BILTMORE DRIVE • FENTON, MISSOURI 63026 Toll Free: 1-800-325-9922 / (314) 349-5656 / FAX (314) 349-5660 Classification:

Combustible Solid

NFPA Sprinkler classification:

Extra Hazard

Extinguishing Media:

Dry Chemical: Water, Carbon Dioxide

Special Fire Fighting Procedures:

Wear self contained breathing apparatus in enclosed areas.

Unusual Fire & Explosion Hazards:

If ignited, foam can produce rapid flame spread, intense heat, dense black smoke and toxic gases. Material can melt into burning liquid

which can drip and flow.

Accumulated polyurethane dust can be readily ignited and Presents a fire risk. High concentrations of dust in the air can explode if

exposed to a flame, spark or other ignition sources.

V. REACTIVITY DATA

Stability:

Stable

Conditions To Avoid:

Incompatibility:

High temperature, open flames: strong oxidizers (i.e. hypochlorites)

Strong oxidizing acids - will degrade

Hazardous Decomposition

Products:

Carbon monoxide: acetaldehyde, acrylonitrile, TDI, polymer fragments, oxides of nitrogen and hydrogen cyanide. Pire retardant foams may

generate emissions of hydrogen chloride, hydrogen bromide, hydrogen

fluoride or phosphoric acid.

Hazardous Polymerization:

Will Not Occur

VL HEALTH HAZARD DATA

Routes of Entry:

Inhalation - Foam dust

Health Hazards:

Coarse dust can cause mechanical irritation of lungs and eyes. Airborne dust is evaluated as a missance dust. If ignited foam may decompose and emit toxic

gases and respiratory irritants.

Eye - Foam Dust

Coarse dust can cause mechanical irritation to the eyes. If exposed, avoid

rubbing eyes.

Carcinogenicity:

NTP:

Νo

LARC Cancer Review:

No

OSHA Regulated:

No

Medical Conditions

Aggravated by Exposure: None Known

Emergency First Aid:

Procedures:

Inhalation:

Remove to fresh air; contact physician if respiratory discomfort

persists.

Eyes:

Flush eyes throughly with water for 15 minutes.

Skin:

None necessary

Ingestion:

None necessary

VII. PRECAUTIONS FOR SAFE HANDLING AND USE

Steps to be Taken in Case Material is Released or Spilled: No special response required - sweep up.

Waste Disposal Method: Federal, state and local authorities should be contacted before attempting any

form of disposal.

Safe Handling and Storage: Warehousing of bun stock, sheets, rolls and fabricated items should be

stored under a fusible sprinkler system with a minimum of six feet clearance

between stacks of foam and the sprinkler heads.

Do not sore foam near any ignition sources such as exposed electrical or gas heating elements, open flames and exposed lights. Do not smoke in foam

storage areas.

Do not allow foam scrap and cuttings to accumulate and maintain clear

aisles with adequate access to all storage areas and exits.

Other Precautions: Notify local fire companies of presence of large quantities of foam.

VIII. CONTROL MEASURES

Ventilation: Local exhaust ventilation is recommended for those processing procedures

Which may generate foam dust and decomposition products. Examples of these processes include sawing, grinding, buffing and flame lamination, hot

wire cutting, heat sealing and hot stamping.

Respiratory Protection: Should be selected based on identity and concentration of air contaminant.

Only NIOSH-approved respirators for protection against the air contaminant

Of concern should be used.

Eye Protection: Recommended for those processing operations which may generate dust.

IX. SPECIAL INFORMATION

Flexible polyurethane foam, like all organic materials, will burn if exposed to a sufficient heat source. The ignition temperature of polyurethane foam will vary depending on the product chemical formulation, but all polyurethane foams are combustible and can create a fire risk. Flexible polyurethane foams, once ignited, may degrade and melt to a combustible liquid which may add to the fire involvement.

Terms such as "fire retardant", "slow burning" and "flame resistant" describe certain flammability properties and should not be regarded as denoting fire safety under all conditions. Small scale fire tests are not intended to reflect hazards presented by these or any other material under real fire conditions.

Thermal decomposition products from polyurethane foams can be toxic and present a risk to humans who are exposed. This is true for all organic materials. Fire risks in varying degrees are common to all fires: heat, carbon monoxide, other toxicants, oxygen depletion and smoke. In fires involving polyurethane foam, particularly flexible foams, large quantities of dense smoke can be generated quickly.

Personnel involved in fire fighting should wear self-contained breathing apparatus and be aware of the exposure to toxic and potentially lethal gases. Standard fire-fighting equipment generally employed by authorized firemen is mandatary.

X. USERS RESPONSIBILITY

An MCDS such as this cannot such as this cannot be expected to cover all possible individual situations. The user has the responsibility to provide a safe workplace. All aspects of an individual operation should be examined to determine if, or where precautions - in addition to those described herein - are required. Any health hazard information contained herein should be on to your employees.

The information contained herein is, to the best of our knowledge and belief, accurate. However, since the conditions of handling and use are beyond our control, we make no guarantee of results and assume no liability for damages incurred by this material. All materials may present unknown health hazards and should be used with caution. Although certain hazards are described herein, we cannot guarantee that these are the only hazards which exist. Final determination of suitability of this material is the sole responsibility of the user. No representations or warranties, either expressed or implied, of merchantability, fitness for a particular purpose or any other nature are made hereunder with respect to the information contained herein or the material to which the information refers. It is the responsibility of the user to comply with all applicable federal, state and local laws and regulations.
