

ACCESS180N™

much more than simple vending...

Access 180N™

- Less Machine Tool Downtime
- Secure Access for Critical Metalworking Items
- Enhanced User Accountability
- Automated Replenishment
- Comprehensive Web-Based Reporting

All in a compact wall-mounted* dispensing system that takes up virtually no floor space!

Compact Vending Has Arrived!

The Access 180N™ manages round cutting tools and carbide inserts, taking the headache out of keeping track of these critical metalworking items. With its compact design, the Access 180N™ can be easily installed where the tools are actually being used without compromising floor space, thus allowing operators to stay at their machines longer.

Dimensions

Height (Inches)	Width (Inches)	Depth (Inches)	Unit Weight

ACCESS 180N™

much more than simple vending...

Compact Inventory Control and Dispensing Solution for Metalworking Tools

As the innovative leader in customer dispensing solutions, MSC meticulously designs each dispensing solution to meet our customers' inventory management needs.

Alternative to Full-Size Vending Machines

We are excited to announce the arrival of a revolutionary new compact dispensing system designed exclusively for metalworking items. Specifically, the Access 180N™ is designed to manage round cutting tools and carbide inserts in an environment where space is a limiting factor. If you are looking to control a small number of critical tools, the Access 180N™ is a perfect alternative to a full-size vending machine.

Large Production Plants or Small Job Shop Requirements

Frequently in large "cell type" production environments the need exists for a COMPACT point-of-use dispensing system, but it has not been available until now. "Job shops," while different from large "cell type" production facilities, have also voiced a need for a similar type of compact dispensing solution. Ironically, both of these diverse environments present challenges for full-size dispensing equipment. As the leader in customized inventory solutions, MSC listened and responded with the all new Access 180N™.

Access 180N™ Delivers Immediate Results

- Decreases tool usage by 15% - 30% or more!
- Drastically cuts time spent by operators walking to acquire tools
- Abolishes stock outages on critical items
- Improves efficiency with Automated Replenishment
- Lowers on-hand inventory levels
- Provides analysis tools with web-based reporting

Easy to Use

Easy to implement and easier to use! Access 180N™ is powered by Apex Industrial Technologies' Connect n' Go™ Technology, providing reliable performance right out of the box. Real-time tracking of tool usage by such things as job number, work order, cell, cost center and department is possible with the Access 180N™. Restrictions such as "Usage Limitations" have historically been available only with full-size dispensing units. They are now available with the compact Access 180N™. The software enables analysis of usage patterns that keeps a small problem from becoming a costly one. In addition, inventory and restocking data are available anytime, anywhere, directly from your web browser.
