## 16. OTHER INFORMATION

**SDS prepared by:**

**Ward Process Inc.**

**SDS prepared on 10/19/2015**

**The information contained herein is, to the best of our knowledge and belief, accurate. However, since the conditions of handling and use are beyond our control, we make no guarantee of results and assume no liability for damages incurred by the use of this material. All materials may present unknown health hazards and should be used with caution. Although certain hazards described herein, we cannot guarantee that these are the only hazards that exist. Final determination of suitability of this material is the sole responsibility of the user. No representations or warranties, either expressed or implied, of merchantability, fitness for a particular purpose or any nature are made hereunder with respect to the information contained herein or the material to which the information refers. It is the responsibility of the user to comply with all applicable federal, state and local laws and regulations.**

**1. DO NOT EXPOSE POLYURETHANE FOAM TO OPEN FLAMES OR OTHER DIRECT OR INDIRECT HIGH TEMPERATURE IGNITION SOURCES.**

Polyurethane foam and hydrocarbon gel will burn if exposed to a sufficient heat source. The ignition temperature of the material will vary depending on the product chemical formulation, but all polyurethane foams and hydrocarbon gels are combustible and represent a fire risk. Once ignited, these materials may degrade and melt to form a combustible liquid, which may add to the fire involvement.

**2. TERMS SUCH AS "FIRE RETARDANT", "SLOW BURNING", "FLAME RESISTANT" AND "UNDERWRITER'S LABORATORY RATED" DESCRIBE CERTAIN FLAMMABILITY PROPERTIES AND MUST NOT BE REGARDED AS DENOTING FIRE SAFETY UNDER ALL CONDITIONS.**

Additionally, small-scale fire tests are not intended to reflect hazards presented by these or any other material under real fire conditions.

**3. SMOKE FROM BURNING FOAM IS IRRITATING TO THE EYES AND RESPIRATORY TRACT. SMOKE INHALED FROM BURNING OR SMOLDERING PRODUCT MAY BE TOXIC.**

Thermal decomposition products from polyurethane foams and hydrocarbon gels can be toxic and present a risk to humans who are exposed. This is true for all organic materials. Fire risks in varying degrees are common to all fires: heat, carbon monoxide, other toxicants, oxygen depletion and smoke. In fires with these materials, great heat, and large quantities of dense smoke and potentially toxic gases can be generated quickly.

**4. STANDARD FIRE-FIGHTING EQUIPMENT GENERALLY EMPLOYED BY AUTHORIZED FIREMEN IS MANDATORY.**

Personnel involved in fire fighting should wear self-contained breathing apparatus and be aware of the exposure to toxic and potentially lethal smoke and gases.

**OTHER INFORMATION:** An SDS such as this cannot be expected to cover all possible individual situations. The user has the responsibility to provide a safe workplace. All aspects of an individual operation should be examined to determine if, or where precautions -- in addition to those described herein -- are required. Any health hazard information contained herein should be passed on to your employees.
